

MathGov v12.4 / SGP v8.3 Audit Response and Finalization Report

Executive verdict

The governing architecture is clear, coherent, calculable where calculation is claimed, internally consistent, and release-ready for its declared public research-source purpose. The release preserves RG -> RF/NCRC -> TRC -> CSV -> RLS; no sixth gate, eighth welfare dimension, compensatory rights rescue, capacity-to-authority inference, or empirical-certification claim has been introduced.

Genuine improvements accepted

Finding	Resolution
Severe-rights review/computation predicate mismatch	One Canon-owned activation predicate now controls both review and computation.
Method B pre-confidence reconstruction	Contribution mass is reconstructed before declared confidence is reapplied.
Registered stream ambiguity	Current notation is $h_{\{k,base\}}$ and $h_{\{k,welfare\}}$; legacy aliases are lineage only.
RMCP misuse fields	Nine minimum governance fields are required by the v8.3 schema.
Agent example and non-decisive state	Floor-preserving weights and refusal of deterministic selection are retained; authority choice is separate.
Workbook PLSS sensitivity	Four floor-preserving constructions are computed and compared; ranking and non-decisiveness remain stable.
WDBIP identity and claims	v1.4, PCC terminology, AIU terminology, schema/vector namespace, and provisional validation boundaries are synchronized.
Validation overclaim	Level 1 latent-structure claims are deferred until adequate preregistered studies.
Table clarity	All active DOCX tables use accessible blue repeating headers, alternating rows, borders, padding, and no-split behavior.

Feedback rejected or bounded

The release does not add a sixth gate, an eighth dimension, a third principal governing source, an RMCP authority licence, a consciousness detector, a password lock as primary integrity, or a claim of empirical or Tier-4 validation. Historical wording was retained in archives rather than silently rewritten.

Readiness by use

Use	Status
Public explanation and website publication	READY
Academic working-paper and research-source release	READY
GitHub open-source release	READY after tag/upload of this exact hash-pinned ZIP
Classroom teaching	READY
Structured Tier 1–2 use	READY within declared scope and competence
Tier 3 audited pilots	READY for bounded pilot and independent replay design
Empirical validation claim	NOT YET ESTABLISHED
Organizational/high-stakes deployment	REQUIRES domain validation, lawful authority, independent assurance, and triggered external warrants

Use	Status
Autonomous Tier 4 deployment	PROHIBITED as a current claim
